Ozwell AI Achieves Drummond pDSI Certification

Certification Recognizes Ozwell's Commitment to Patient-Centered Interoperability

[Fort Wayne, IN - July 15, 2025] - Medical Informatics Engineering, Inc and its subsidiary, BlueHive Health, LLC, leading innovators in occupational health and connected care solutions, are proud to announce that their AI medical assistant, Ozwell has earned pDSI Certification from the Drummond Group.

The certification applies specifically to the Ozwell platform and validates its compliance with Intervention Risk Management (IRM) and Source Attribution Disclosure standards derived from the ONC's (b)(11) regulation. The certification affirms Ozwell's readiness to support responsible, transparent AI usage in healthcare, earning trust from providers, employers, and EHR partners alike.

Will Reiske, CTO and Co-founder of BlueHive Health, stated, "Technology should not try to take the lead in a clinical encounter. Ozwell plays a supporting role. It is always on and always helpful, but never in the way. That is exactly why it became the first ambient AI tool certified under the Predictive Decision Support Initiative. It proves that AI can be powerful without being overpowering."

"Ozwell's certification under the Predictive Decision Support Initiative reflects a core belief that has guided its development from day one," said Doug Horner, CEO and Founder of Medical Informatics Engineering. "Clinicians didn't go into medicine to fill out paperwork. Ozwell lifts that burden. It listens, documents, routes, and organizes quietly, intelligently, and in real time. We are not here to replace providers. We are here to restore their time, their energy, and their connection to care."

"I get two to three hours back every day," said Dr. Jeff Margolis of Michigan Healthcare Professionals. "You can throw away the pen, the paper, and the keyboard. Just look the patient in the eye and stop worrying about documentation."

What Is Drummond pDSI-Risk Certification?

The **Drummond pDSI-Risk certification** provides market confidence for **standalone AI applications** and **predictive decision-support interventions**. It verifies that a product meets key compliance and risk management criteria, including:

- **Intervention Risk Management (IRM)** protocols
- **Source Attribution Disclosure** mechanisms
- Alignment with the **ONC's (b)(11) regulation** for transparency and trustworthiness

This certification distinguishes Ozwell in a competitive digital health market, giving healthcare organizations and developers confidence that the platform delivers reliable, regulation-aligned functionality for patient data sharing and clinical insight.

About Ozwell

Ozwell believes that technology should empower - not burden - healthcare professionals. Our AI-driven solutions automate documentation, optimize workflows, and enhance decision-making, giving providers more time to focus on delivering exceptional care.

About Medical Informatics Engineering, Inc.

MIE serves as the innovation engine for business units that serve hospitals and health systems, physician practices, Fortune 500 employers, government agencies and consumers. MIE's web-based health information technology platform is helping physicians, nurses and administrators make a meaningful difference in healthcare delivery across the globe.

About BlueHive Health, LLC

BlueHive develops technology that connects employers, employees, and healthcare providers - simplifying health compliance across industries including healthcare, transportation, manufacturing, and public safety. Ozwell is the company's flagship AI medical assistant, designed to make accessing, managing, and sharing health information easier for everyone.
